PRINTER WITH AUDIO OR VIDEO RECEIVER, RECORDER, AND REAL-TIME CONTENT-BASED PROCESSING LOGIC

Abstract of the Disclosure

[0064]   A system and method for monitoring events from a media stream and triggering an action in response to detected events. The action is preferably based on information relating to the event received by the system. The system can generate a paper document that reflects some aspects of the detected event such as a summary describing the event. The system can also generate a network message (e.g., email or paging call) in response to the detected event. In other embodiments, the system stores multimedia in memory in response to the detected event. The system can also generate an audio on a speaker or a video on a video display system attached to the printer based on the detected event.
